CASE STUDIES

Aged Care Homes - Maybanke Hostel (Salvation Army NSW)

Hostel management were looking for a heating solution to replace ineffective ceiling and wall heating panels. This project was carried out in stages in conjunction with the replacement of floor finishes to avoid disruptions to elderly residents.

Year completed: Stage 1 - 2005, Stage 2 - 2006

Floor finishes: Carpet and vinyl

Thermostat type: Tamper proof air sensing thermostat controls

Total kW installed: 49kW

Comparison panel heating output: 84kW

Commercial application - Plantagenet Shire Council Office, Mt. Barker WA

The architect specified Speedheat floor heating because of the products' low design parameters and also because heating could easily be zoned.

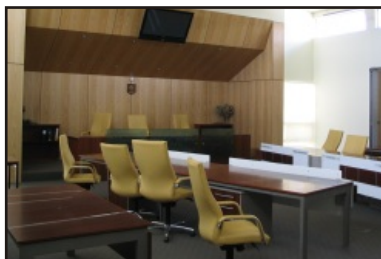

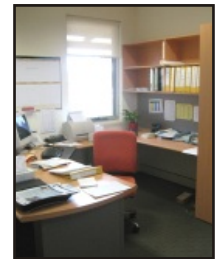

Year completed: 2006

Floor finishes: Carpet

Thermostat type: Manual floor sensing thermostat controls

Total kW installed: 68.5kW

Comparison Slab/Screed output: 171kW

Multi unit dwelling development - Victoria Place, Drummoyne NSW

Builder referred client to Speedheat to enquire on design parameters as original floor heating specified required substantial supply (additional mains supply). With the use of floor insulation and Generation4 floor heating, Speedheat was able design a heating solution at a 1/3 output to original specifications, without compromising comfort levels.

Year completed: 2007

Floor finishes: Tile

Thermostat type: Programmable floor sensing

Total kW installed: 86kW

Comparison Slab/Screed Output: 250kW
